

# 2018 Community Watershed Monitoring Network Results

presented by Julie Pisani & Lauren Fegan

# Introduction

- Julie Pisani, Drinking Water & Watershed Protection Program Coordinator
- Lauren Fegan, Drinking Water & Watershed Protection Special Projects Assistant

DRINKING WATER  
WATERSHED  
PROTECTION

# Outline of Today's Results Session

- Program Overview
- Trend Analysis 2011-2017
- 2018 Results
- RDN Stewardship Group Support
- 2019 Monitoring Season Update
- Questions?

# Thank you to...

## Community Stewardship Groups

- Fanny Bay Salmonid Enhancement Society (FBSES)
- Nile Creek Enhancement Society (NCES)
- Qualicum Beach Streamkeepers (QBS)
- Friends of French Creek Conservation Society (FFCCS)
- Mid Vancouver Island Habitat Enhancement Society (MVIHES)
- Lantzville & Nanoose Streamkeepers Society (LNS & NSS)
- Island Waters Fly Fishers (IWFF A & B)
- Walley Creek Streamkeepers (WCS)
- Departure Creek Streamkeepers (DCS)
- Vancouver Island University Research Lab (VIU)
- Nanaimo and Area Land Trust (NALT)
- Gabriola Streamkeepers (GSk)

## Other Partners

- BC Ministry of Environment and Climate Change Strategy (ENV)
- Island Timberlands LP (IT under Mosaic Forest Management)

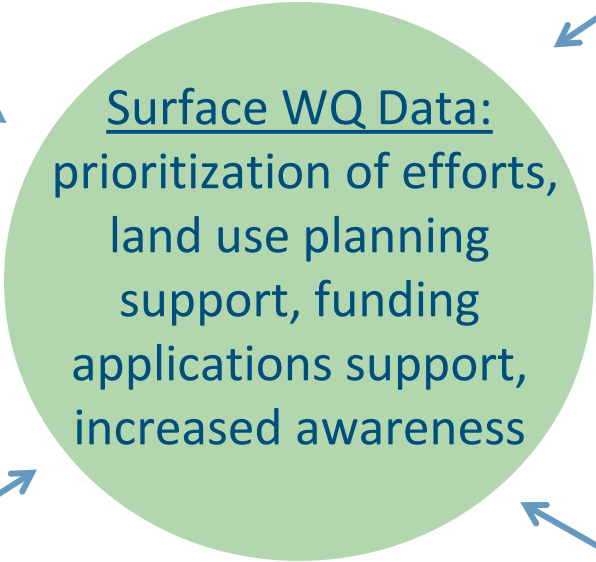

**DRINKING WATER  
WATERSHED  
PROTECTION**

# Community Watershed Monitoring Network Partners

**RDN DWWP:** manage equipment, provide technical support & coordination, deliver training, data entry, summarize results

**Community Stewardship Groups** – attend annual training, perform equipment calibrations & sampling, provide local knowledge

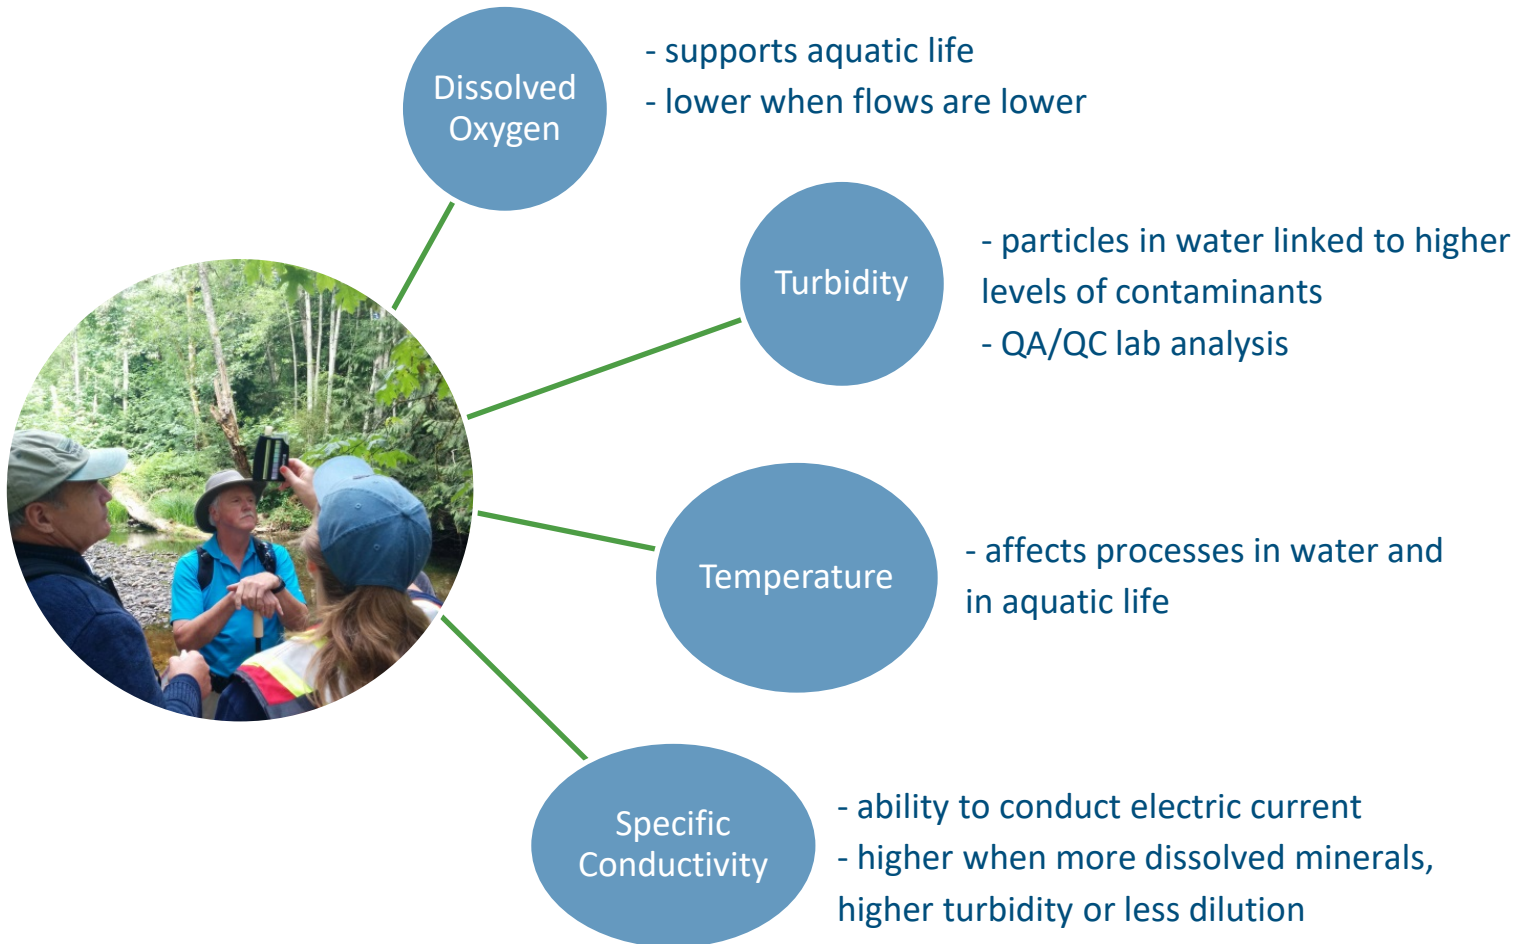

Surface WQ Data:  
prioritization of efforts,  
land use planning  
support, funding  
applications support,  
increased awareness

**BC ENV:** technical support, training & sampling protocols, data review, provide database and data portal

**Island Timberlands (Mosaic Forest Management):** provide safety gear, land access, QA/QC lab analysis sponsorship

# Water Quality Monitoring Parameters

# Water Quality Objectives & Guidelines

- **Water Quality Objective**

- Developed for **specific water bodies** manage for water quality to protect water uses in that watershed
- i.e. Englishman River Aesthetic Water Temperature Objective  $\leq 15^{\circ}\text{C}$

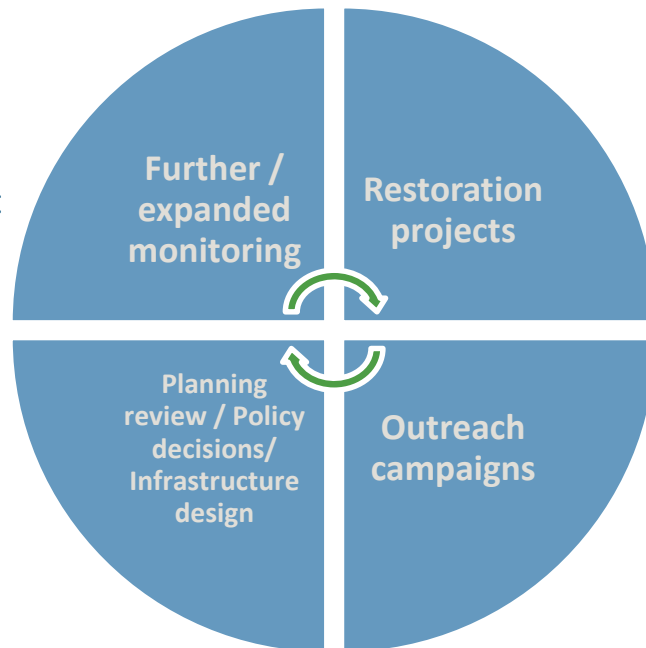

- **Water Quality Guideline**

- Developed for **B.C.'s** aquatic resources and the protection of aquatic life, wildlife, agriculture, drinking water sources and recreation
- To assess and manage the health, safety and sustainability of freshwater
- i.e. Coho Rearing Water Temperature Guideline  $\leq 17^{\circ}\text{C}$

# Analyzing Trends

A comprehensive analysis of the 7-year dataset was completed by Ecoscape Environmental Consultants, expert water quality biologists. The analysis considered land use data to investigate influence on water quality trends.

**The objective of the analysis** was to find meaning in the comprehensive dataset to direct future action; help to target and inform:

# 7- Year Analysis

Temperature, Dissolved Oxygen, Conductivity, Turbidity Data collected from 2011-2017

- Were there observable **changes** in water quality over time?
- Were there frequent **exceedances** of water quality guidelines or objectives?
- Does **land use and watershed characteristics** have a statistically predictable **effect** on water quality?

# Key Findings

## Changes over time

*Mann- Kendall tests were run on the 34 sites that had at least 6 years of data to analyze for significant trends overtime.*

- 27 /34 sites had stable water quality and changes over time were not observed
- 5 sites experienced increases in mean summer and fall turbidity from 2011- 2017
  - Little Qualicum, Beach @ Hemsworth, French @ Grafton, Nanaimo R u/s Haslam, Englishman @ Hwy 19A
- 2 sites experienced changes in conductivity from 2011-2017
  - Beach Creek decreasing trend; Cat Stream increasing trend

# Key Findings

## Frequent Exceedances of Water Quality Guidelines / Objectives

- 12 sites of concern\*
  - 7/12 have high agricultural use within the watershed
  - 2/12 have upstream stormwater outfalls
  - 3/12 not well understood – likely related to annual differences in rainfall and temp.

\*Mallett Creek (turbidity); Holden Creek x2 (dissolved oxygen); Haslam Creek (dissolved oxygen); Cat Stream (turb, temp, cond); Walley Creek (DO, turbidity); Shelly Creek (DO, temp, turb); Swane Creek (DO, temp, turb); French Creek (DO, temp, turb); Grandon (DO, temp, turb); Little Qualicum (temp); Annie Creek (DO, temp, turb).

# Key Findings

## Land Use Modelling – Statistical Predictors of Water Quality

- Watersheds with **<60% forest land use** area associated with changes in turbidity and conductivity
- Watersheds with **>20% agricultural and rural residential land use** associated with higher turbidity and lower dissolved oxygen
- Watersheds with **paved road densities  $>0.002\text{m}/\text{m}^2$**  associated with increases in conductivity and higher water temperatures

# Percent Land Use Composition

- Watershed area upstream of each site
- Land use delineated from GIS maps
- Percentage of six land use categories
- Land Use Statistical Modelling on all sites

Class	Calculation
Agricultural	Rural Residential + Agriculture
Forested	Forestry + Conservation
Impervious	Commercial + Industrial + Transportation
Recreation	Institutional + Recreation
Residential	Comprehensive + Multi-Family Residential + Single-Family Residential
Water	Water + Wetland

# Percent Land Use Composition for WR 7

Surface Water Quality Trend Analysis for  
Regional District of Nanaimo Community Watershed  
Monitoring Network Data (2011-2017)

Prepared For:  
Regional District of Nanaimo

Prepared By:  
Ecoscape Environmental Consultants Ltd.  
July 2018

Report received by the  
RDN Board for information  
Dec. 2018.

Presentations given to  
councils on results of  
interest to their municipality  
between Jan – March  
2019.

Report available online at  
at [rdn.bc.ca/dwwwpreports](http://rdn.bc.ca/dwwwpreports)

# In 2018....

- All sites maintained
- QA/QC lab analysis completed, 10% of sites:
  - Grandon @ Laburnum
  - Beach @ Memorial Golf Course
  - French @ new hwy
  - French @ Barclay
  - Millstone @ Biggs
  - Millstone @ Jingle Pot
- VIU Coastal Hydrology & Climate Change Research Lab joined the network
- New and returning volunteers

**2018 Sample Period (Tuesdays):**  
**Summer Low Flow Aug 7 – Sept 4\***  
**Fall Flush Oct 2 – Nov 6\*\***

*\*Additional sampling depending on the site Sept 11 & 18*

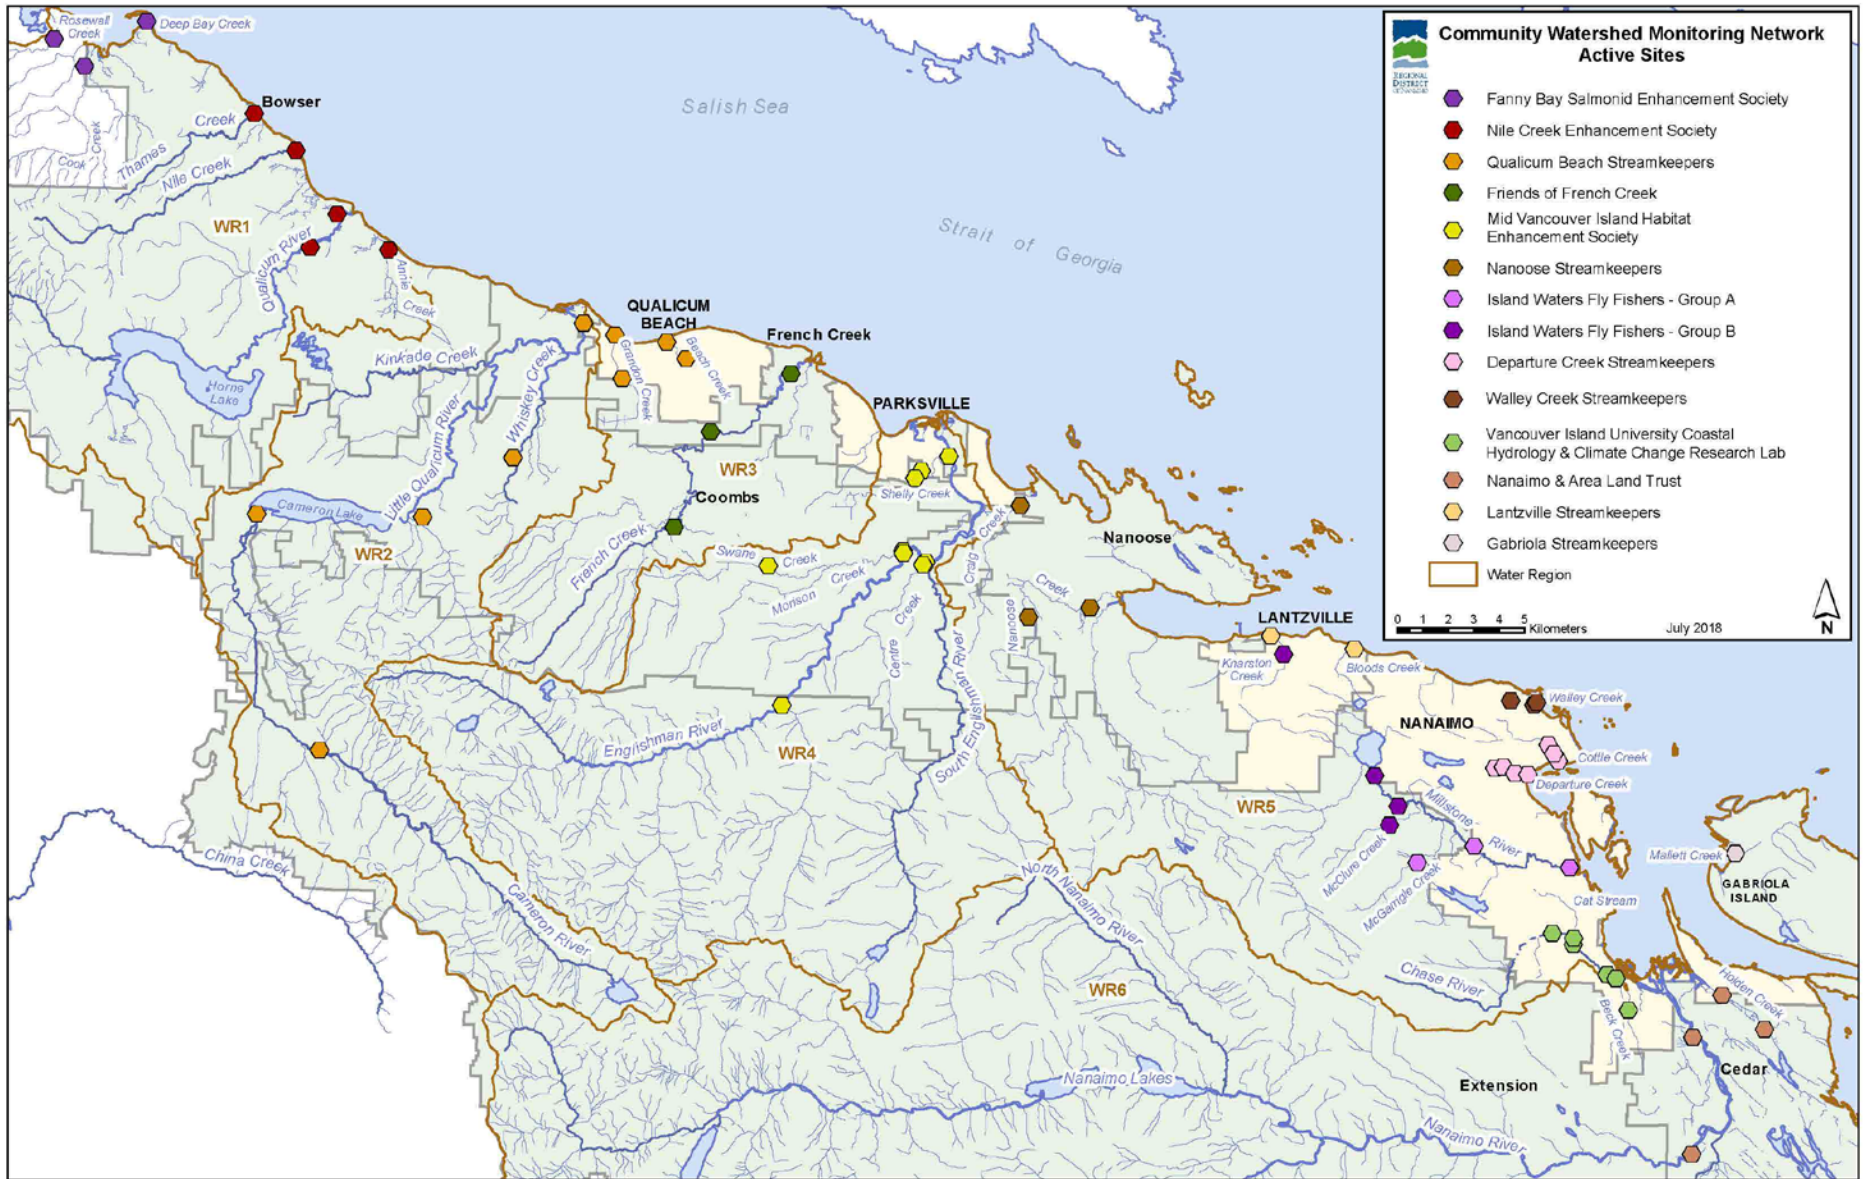

*\*\*Some groups started Oct 2, some started Oct 9*

# Positives

- Excellent cooperation between all partners
  - Sharing equipment
  - Fire hazard road closures
- Stream stewardship & growing awareness in community
  - Restoration projects
  - Physical stream assessments
- Great coverage!
  - 62 sites; 36 streams; 25 watersheds

# Precipitation Data - South

Nanaimo Airport – Environment Canada Station

## 2014 rainfall:

**22.6 mm Summer**  
(Aug 1 – Sept 10)

**282.2 mm Fall**  
(Oct 1 – Nov 12)

## 2015 rainfall:

**22.1 mm Summer**  
(Aug 1 – Sept 1)

**116.7 mm Fall**  
(Oct 1 – Nov 11)

## 2016 rainfall:

**23.4 mm Summer**  
(Aug 1 – Aug 31)

**379.2 mm Fall**  
(Oct 1 – Nov 8)

## 2017 rainfall:

**3 mm Summer**  
(Aug 1 – Aug 31)

**336.4 mm Fall**  
(Oct 1 – Nov 21)

## 2018 rainfall:

**3 mm Summer**  
(Aug 1 – Aug 31)

**109.1 mm Fall**  
(Oct 1 – Nov 6)

# Precipitation Data - North

## 2014 rainfall:

**29.4 mm Summer**  
(Aug 1 – Sept 10)

**187.5 mm Fall**

(Oct 1 – Nov 12)

## 2015 rainfall:

**24.0 mm Summer**  
(Aug 1 – Sept 1)

**82.3 mm Fall**

(Oct 1 – Nov 11)

## 2016 rainfall:

**15.7 mm Summer**  
(Aug 1 – Aug 31)

**252.2 mm Fall**

(Oct 1 – Nov 8)

## 2017 rainfall:

**3.5 mm Summer**  
(Aug 1 – Aug 31)

**257.2 mm Fall**

(Oct 1 – Nov 21)

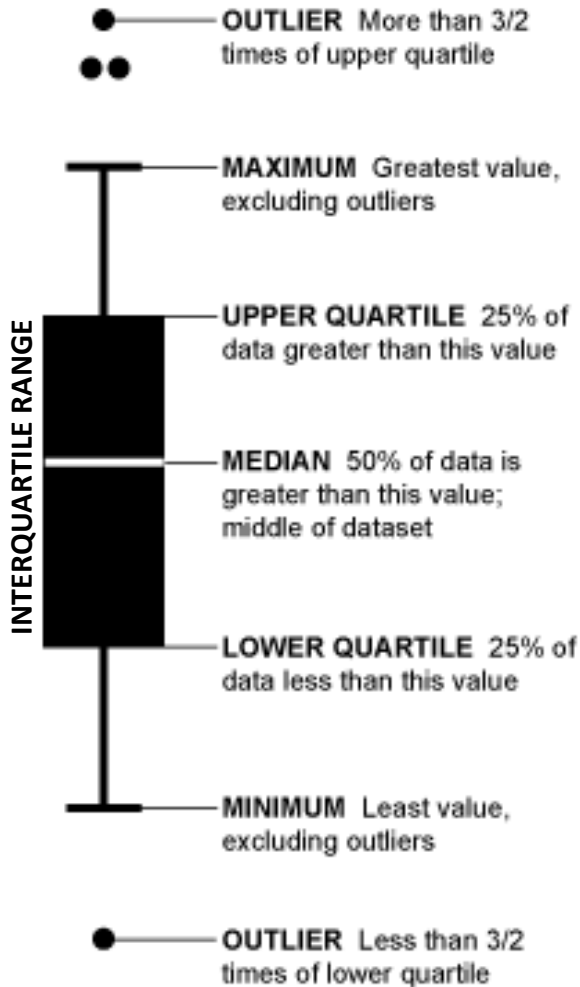

## 2018 rainfall:

**0.8 mm Summer**  
(Aug 1 – Aug 31)

**53 mm Fall**

(Oct 1 – Nov 6)

# How to Interpret a Box Plot

## Guideline

--- Aquatic Life Guideline for Coho Rearing

○ 2018 Samples

\* Outlier 2011-2017

- Interquartile range contains 50% of the values
- Maximum & minimum values shown at the end of each whisker = the range that includes all data except outliers

## Example:

# Water Temperature

- **Englishman River aesthetic drinking water objective (weekly average  $\leq 15^{\circ}\text{C}$ )**
- **Aquatic life guideline for Coho rearing (weekly average  $\leq 17^{\circ}\text{C}$ )**
  - Affects metabolic rates of aquatic organisms
  - Can alter physical and chemical properties of water

# Water Region 1 – Summer Temperature

- |   |                                      |   |                   |
|---|--------------------------------------|---|-------------------|
| BIG QUALICUM RIVER JUST U/S HWY 19 BRIDGE           | ANNIE CREEK                          | <b>Guideline</b>                        | 2018 Samples      |
| COOK CREEK RDN SITE AT OLD ISLAND HIGHWAY CONNECTOR | NILE CREEK 50M U/S OLD ISLAND HWY    | Aquatic Life Guideline for Coho Rearing | Outlier 2011-2017 |
| ROSEWALL CREEK RDN SITE                             | THAMES CREEK 200M U/S OLD ISLAND HWY |   |                   |
| BIG QUALICUM RIVER ABOUT 700M D/S HATCHERY          | DEEP BAY CREEK                       |   |                   |

Aug 7<sup>th</sup> had values close to guideline: 16.9 °C at Cook Creek & 16.8 °C at Rosewall, Annie & Thames Creeks

# Water Region 2 – Summer Temperature

Both Little Qualicum River sites had temperature exceedances on multiple dates, a contributing factor could be the warm surface discharges from Cameron Lake

# Water Region 3 – Summer Temperature

## Guideline

- - - Aquatic Life Guideline for Coho Rearing

- FRENCH CREEK AT GRAFTON ROAD
- FRENCH CREEK AT NEW HIGHWAY
- GRANDON CREEK AT LABURNUM ROAD
- BEACH CREEK NEAR CHESTER ROAD AT HEMSWORTH ROAD

- FRENCH CREEK AT BARCLAY BRIDGE
- BEACH CREEK NEAR MEMORIAL GOLF COURSE POND
- GRANDON CREEK WEST CRESCENT (CAISSONS)

- 2018 Samples
- \* Outlier 2011-2017

Aug 7<sup>th</sup> exceedances at French Creek (Barclay) & Grandon Ck (West Cres)

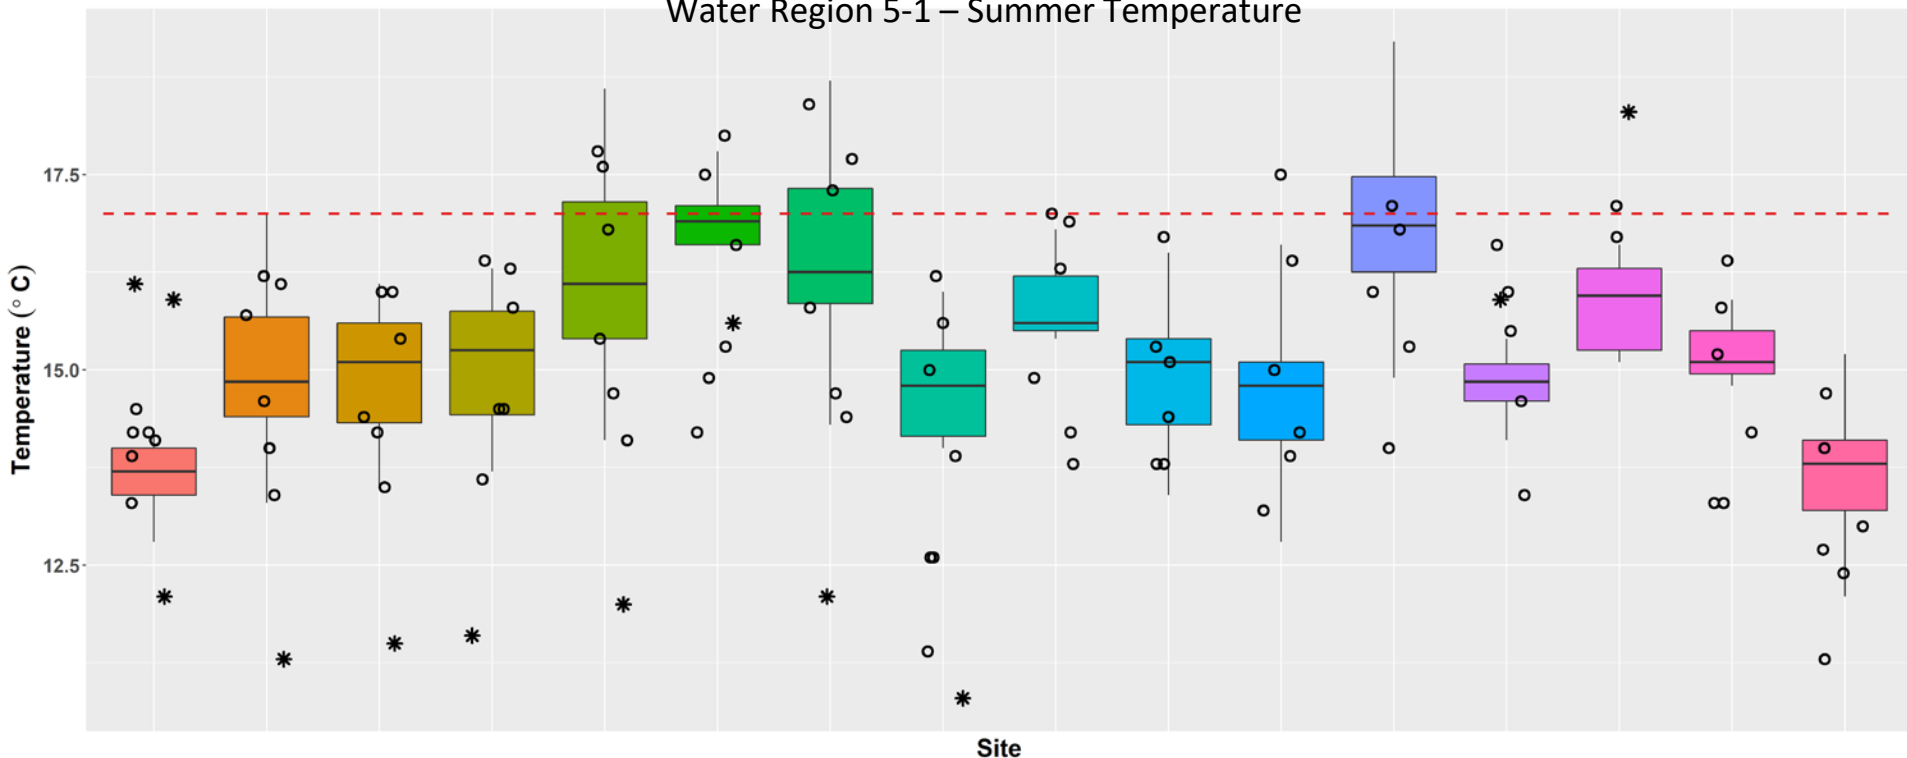

# Water Region 4 – Summer Temperature

Aug 7<sup>th</sup> exceedances at Englishman River (19A), Morison Creek & both Shelly Creek sites

Aug 21<sup>st</sup> exceedance at South Englishman River

# Water Region 5-1 – Summer Temperature

|---|--|--|---|

Aug 7<sup>th</sup> exceedances at Chase River (all sites), Cat Stream, Millstone (all sites) & McGarrigle

Exceedances Aug 14<sup>th</sup> at McGarrigle, Millstone (Jingle Pot) & Chase River (Estuary)

Exceedances Aug 14<sup>th</sup> & 21<sup>st</sup> Millstone River (East Wellington & Barsby Park)

# Water Region 6 – Summer Temperature

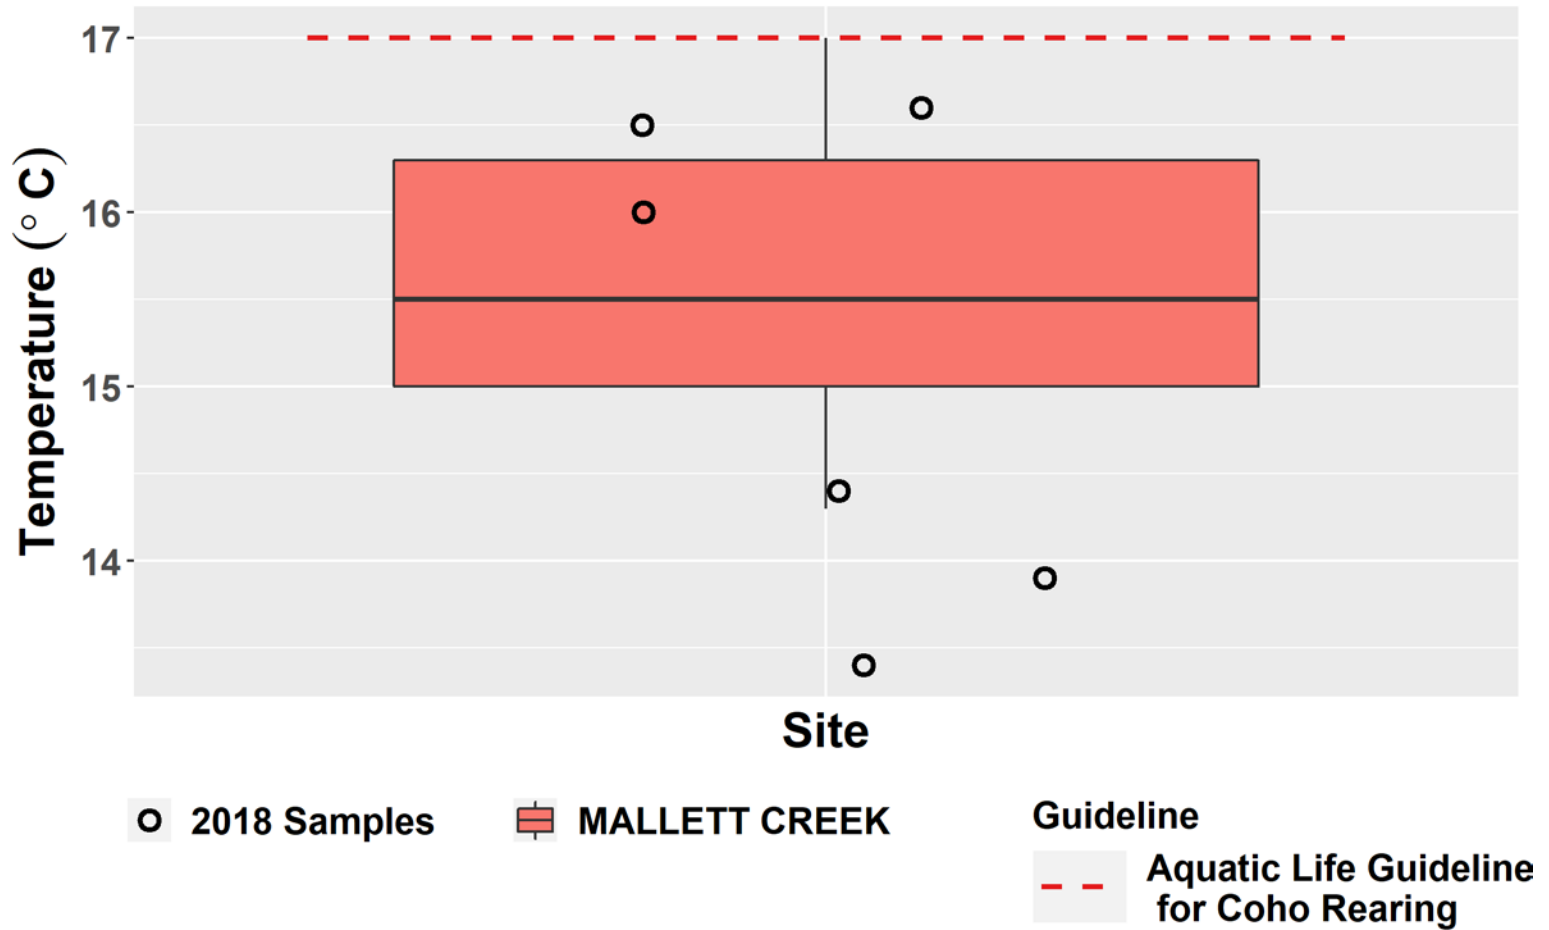

## Aug 7<sup>th</sup> exceedances at Beck Creek

Exceedance for 4 consecutive weeks (Aug 7<sup>th</sup> – Aug 28<sup>th</sup>) at Nanaimo River (u/s Haslam)

Exceedance for all 5 summer sample dates at Nanaimo River (Cedar Rd) & Lower Holden Creek

# Water Region 7 – Summer Temperature

Summer temperatures average 15.5 °C

**Aquatic life guideline for Coho rearing (mean weekly maximum temperatures  $\leq 17^{\circ}\text{C}$ ) potential to exceed at:**

<b>Little Qualicum River</b>	<b>Shelly Creek</b>	<b>McGarrigle Creek</b>
<b>French Creek Barclay</b>	<b>Nanoose Matthew X</b>	<b>Chase River</b>
<b>Grandon Creek W Cr</b>	<b>Knarston u/s Lantz</b>	<b>Cat Stream</b>
<b>Englishman River 19A</b>	<b>Walley HBRd, Beach</b>	<b>Nanaimo River</b>
<b>Morison Creek</b>	<b>Cottle Creek</b>	<b>Beck Creek</b>
<b>S. Englishman River</b>	<b>Millstone River</b>	<b>Lower Holden Creek</b>

**Temperature**

- Typical of shallow wide portions and areas with minimal canopy cover.
- Okay if juvenile fish have lower temperature refuges

<b>Sample Year</b>	<b># Summer Samples</b>	<b># Summer <math>\geq 17^{\circ}\text{C}</math></b>	<b>% Summer <math>\geq 17^{\circ}\text{C}</math></b>
2014	250	73	29.2%
2015	225	51	22.7%
2016	274	58	21.2%
2017	282	80	28.4%
2018	299*	56	18.7%

\*Includes samples taken Aug 7, 2018 through to and including Sept 4, 2018.

# Dissolved Oxygen

- 30 day average LESS THAN 8 mg/L
- Instantaneous minimum LESS THAN 5 mg/L

- Solubility of Oxygen ↓ as temperature ↑
- Additional factors affecting DO: photosynthesis, water turbulence and oxygen demand
- Most pristine coastal streams would average >8 mg/L

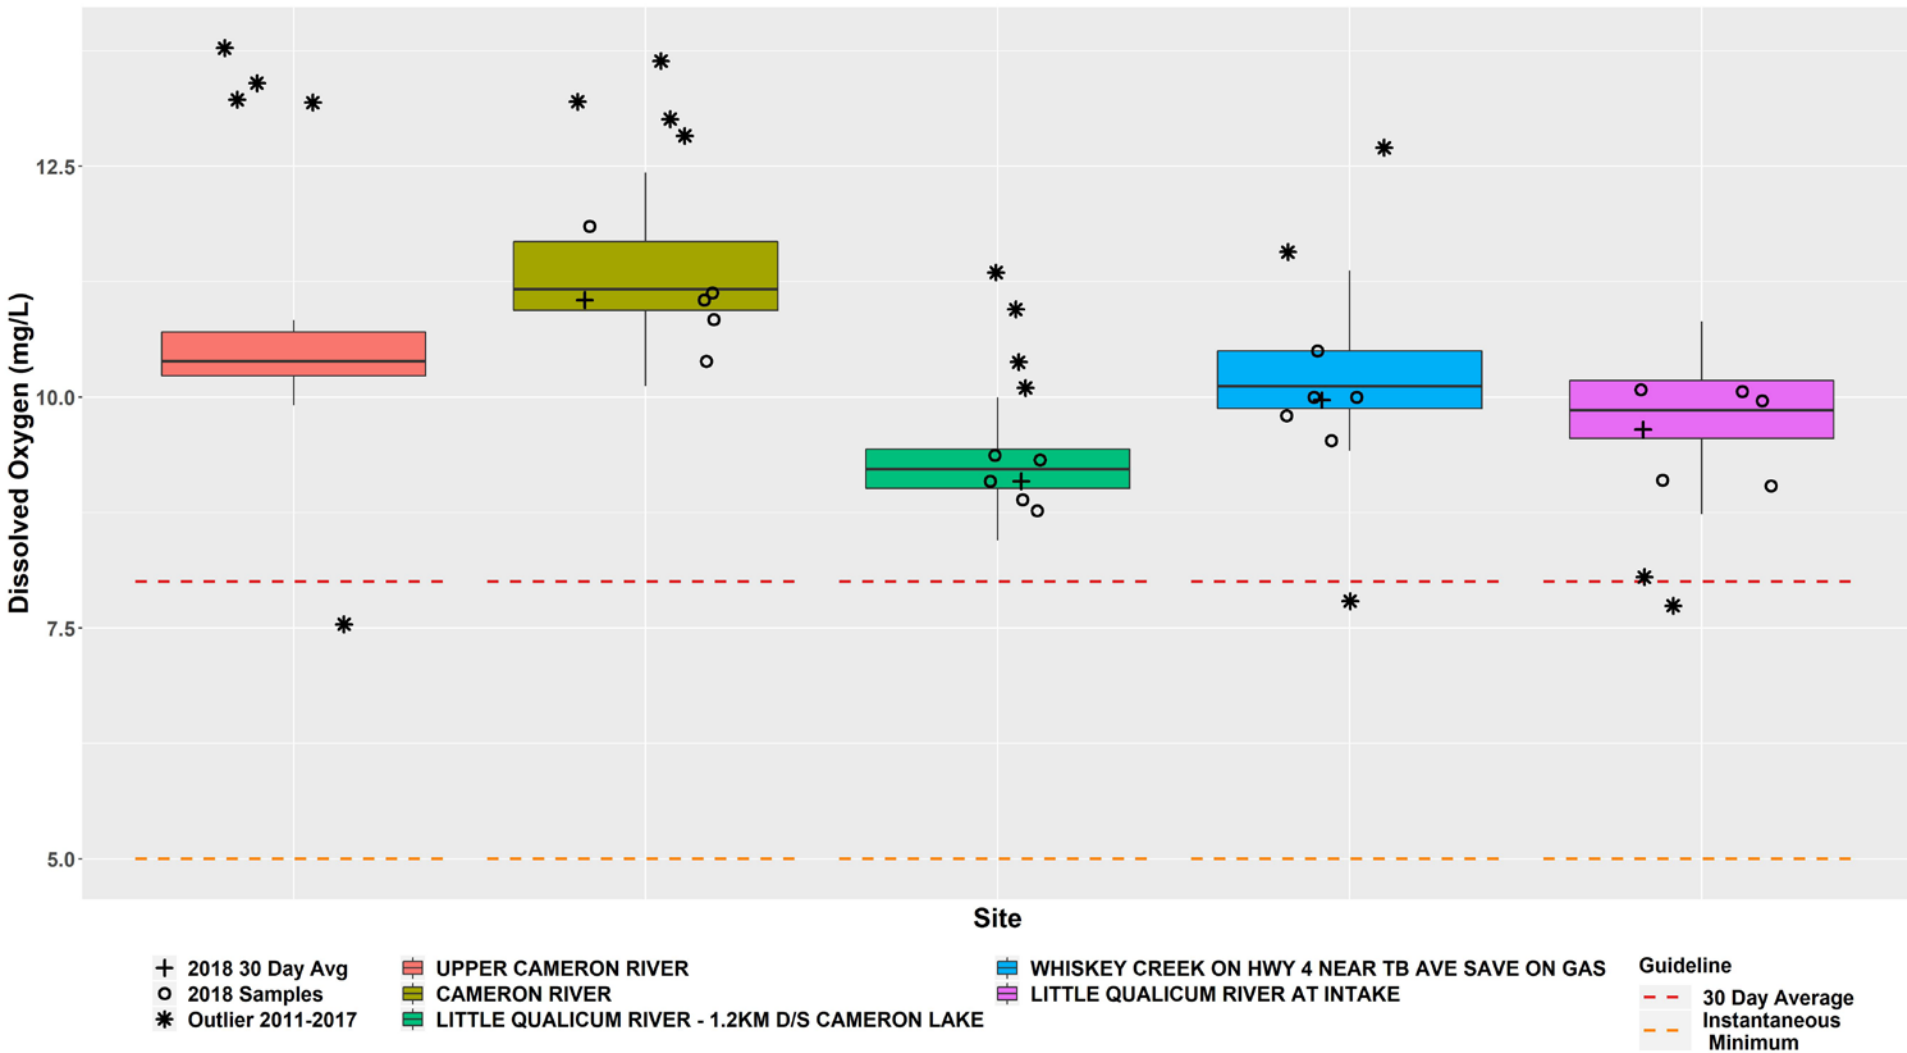

# Water Region 1 – Summer Dissolved Oxygen

Annie (7.53 mg/L) & Cook (7.58 mg/L) Creeks both were below the 30-day average threshold  
 Lowest DO levels experienced Aug 7<sup>th</sup> at both sites

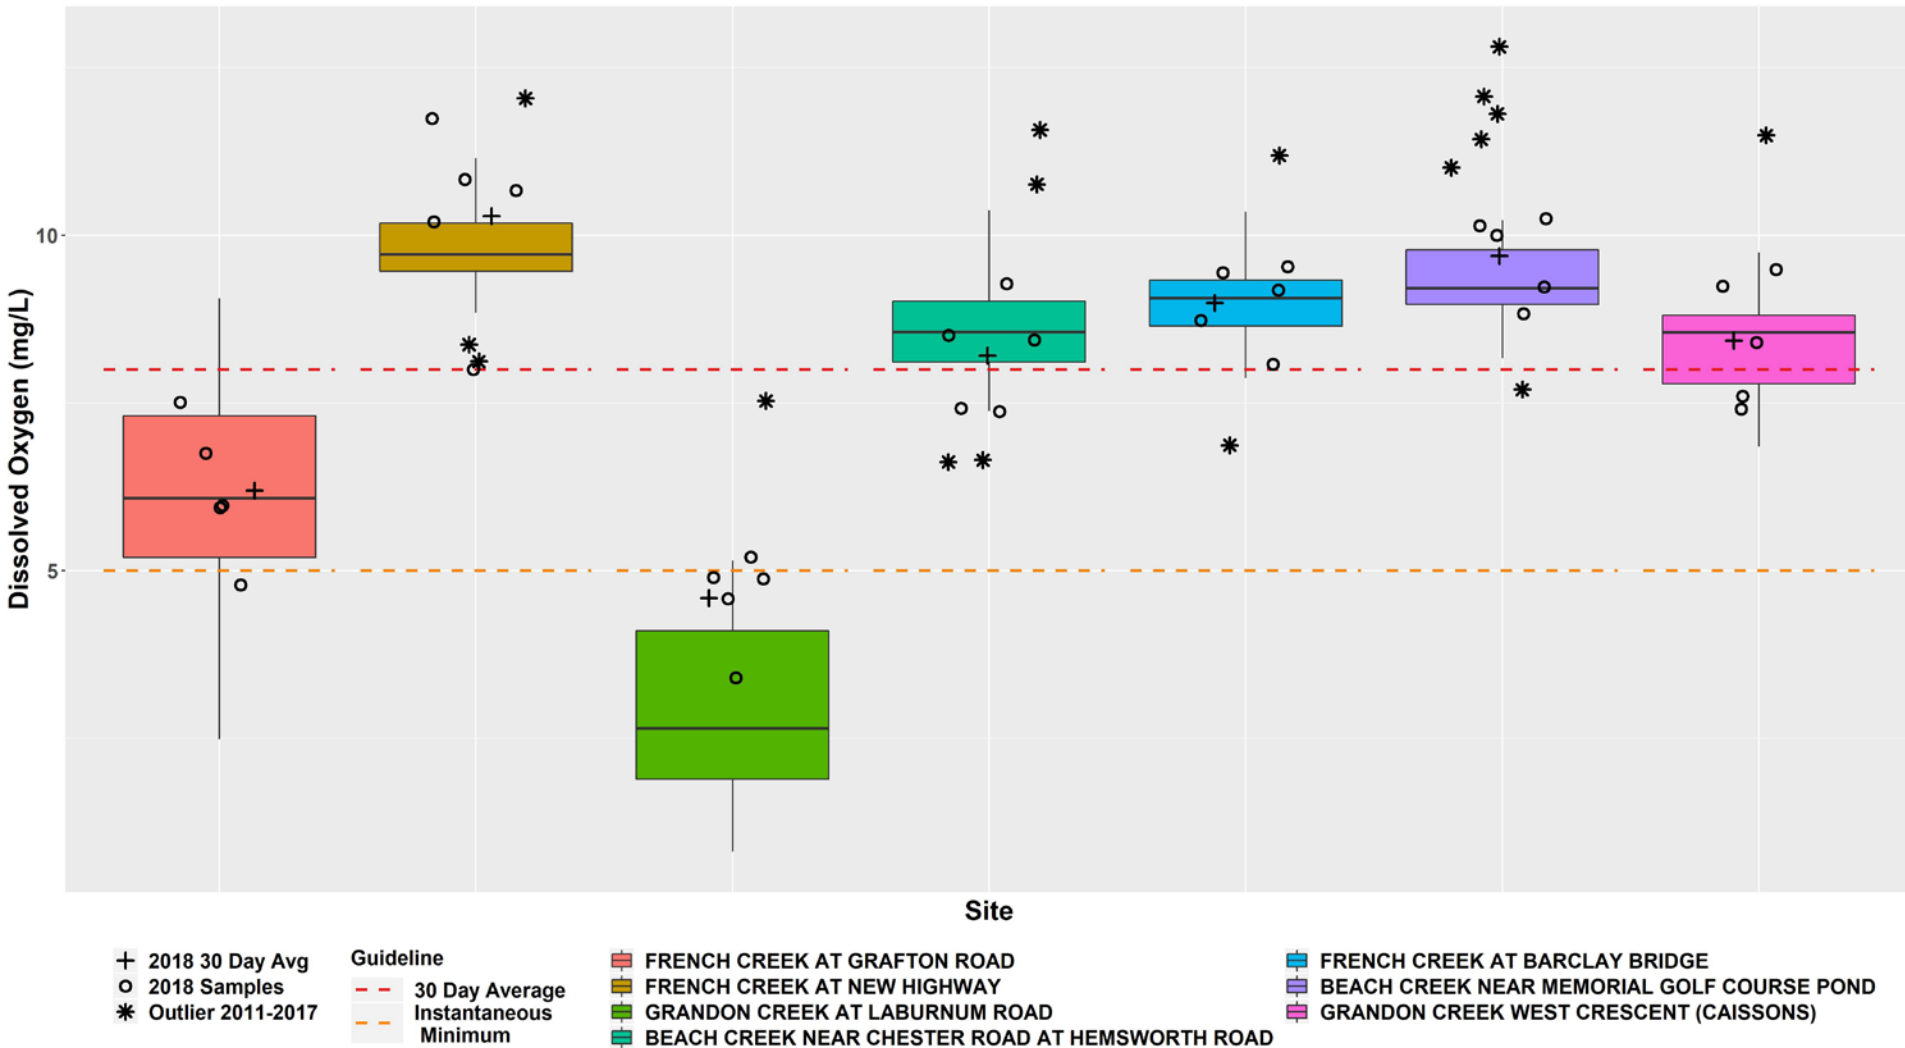

# Water Region 2 – Summer Dissolved Oxygen

No exceedances in 2018

# Water Region 3 – Summer Dissolved Oxygen

DO below 30-day average: Grandon Ck (Laburnum, 4.59 mg/L) & French Ck (Grafton, 6.19 mg/L)

Lowest DO levels experienced Aug 7<sup>th</sup> at Grandon (Laburnum) & Aug 13<sup>th</sup> at French (Grafton)

# Water Region 4 – Summer Dissolved Oxygen

Guideline

- - - 30 Day Average
- - - Instantaneous Minimum

Below fall DO 30-day average at Lower Holden Creek (5.66 mg/L)

Lower Holden ditched u/s of site and could contribute to lower DO levels

# Water Region 7 – Summer Dissolved Oxygen

- + 2018 30 Day Avg
- 2018 Samples
- \* Outlier 2011-2017

MALLETT CREEK

Guideline

- - 30 Day Average
- - Instantaneous Minimum

Below 30-day average Mallett Creek (7.14 mg/L)

# Dissolved Oxygen (DO)

**Below instantaneous min. guideline (5 mg/L) at:**

<b>Grandon Ck (Laburnum)</b>	<b>Craig Ck (u/s NWB)</b>
<b>French Ck (Grafton)</b>	<b>Nanoose Ck (both sites)</b>
<b>Swane Ck (Errington)</b>	<b>Lower Holden Ck</b>
<b>Cottle Ck (Nottingham)</b>	<b>Millstone (E Well)</b>

- Both summer & fall 2018 sample periods had values <5 mg/L minimum in Swane, Craig, Nanoose (both sites) and Lower Holden Creeks

- Occurred consistently at very low flow sites
- In 2018 all sites with values <5 mg/L also were below the 30-day average threshold (8 mg/L)

# Dissolved Oxygen (DO)

- Sites in **blue** had levels below both DO guidelines
- Both summer & fall 2018 sample periods had 30-day averages <8 mg/L minimum in Swane, Nanoose (Campground) and Lower Holden Creeks
- In 2018 one site went subsurface:
  - Swane Creek downstream Errington Road between Aug 14<sup>th</sup> & Aug 28<sup>th</sup>

Below 30 day average (8 mg/L) at:	
Annie Creek	Beck Ck
Cook Creek	McGarrigle Creek
<b>Swane Creek**</b>	Englishman (19A)
McClure Creek	Chase (Estuary)
<b>French Creek (Grafton)</b>	
Knarston u/s Lantzville Rd	
<b>Nanoose Creek (both sites)</b>	
Shelly Creek (both sites)	
<b>Cottle Ck (Nottingham &amp; Hammond)</b>	
<b>Millstone (Biggs, E Well, Jingle Pot)</b>	
<b>Walley Creek (Hammond &amp; Beach)*</b>	
<b>Lower Holden Creek</b>	
Holden Creek	
Nanaimo River (both sites)	
Mallett Creek	

\*4 in 30 rather than 5 in 30 \*\*3 in 30

# Specific Conductivity

- **Most pristine coastal streams measure  $<80$   $\mu\text{S}/\text{cm}$**
- **No provincial guideline for this parameter**
- Measure of concentration, charge and mobility of dissolved ions in water
  - Usually  $\uparrow$  as water temperature  $\uparrow$
- Specific conductance measures conductivity corrected to  $25^{\circ}\text{C}$

## Water Region 1 – Summer Specific Conductivity

Annie Creek 2011-2017 averages: fall  $>100 \mu\text{S}/\text{cm}$  & summer  $>150 \mu\text{S}/\text{cm}$   $\rightarrow$  values suggest groundwater influence

## Water Region 1 – Fall Specific Conductivity

Annie Creek 2011-2017 averages: fall  $>100 \mu\text{S}/\text{cm}$  & summer  $>150 \mu\text{S}/\text{cm}$   $\rightarrow$  values suggest groundwater influence

# Water Region 3 – Summer Specific Conductivity

All sites except French Ck @ Grafton: average 2011-2017 summer conductivities  $>160 \mu\text{S}/\text{cm}$  → values suggest groundwater influence or salinized inflow from adjacent lands

# Water Region 3 – Fall Specific Conductivity

Decrease in fall conductivity suggests dilution of groundwater influence in lower French Creek sites (new hwy & Barclay bridge)

# Water Region 4 – Summer Specific Conductivity

- UPPER ENGLISHMAN RIVER U/S CENTRE FORK CREEK
- SWANE CREEK DOWNSTREAM OF ERRINGTON RD
- MORISON CREEK JUST UPSTREAM ENGLISHMAN RIVER
- ENGLISHMAN RIVER JUST UPSTREAM MORISON CREEK
- CENTRE CREEK U/S SOUTH ENGLISHMAN RIVER
- SOUTH ENGLISHMAN RIVER JUST U/S ENGLISHMAN RIVER
- ENGLISHMAN R. AT HIGHWAY 19A
- SHELLY CREEK AT HAMILTON RD
- SHELLY CREEK @ END OF BLOWER RD
- 2018 Samples
- Outlier 2011-2017

Centre & Shelly Ck sites 2011-2017 average: summer >200 µS/cm; fall >150 µS/cm → values suggest groundwater influence

Upper Englishman generally <70 µS/cm → less groundwater influence

## Water Region 4 – Fall Specific Conductivity

- UPPER ENGLISHMAN RIVER U/S CENTRE FORK CREEK
- SWANE CREEK DOWNSTREAM OF ERRINGTON RD
- MORISON CREEK JUST UPSTREAM ENGLISHMAN RIVER
- ENGLISHMAN RIVER JUST UPSTREAM MORISON CREEK
- CENTRE CREEK U/S SOUTH ENGLISHMAN RIVER
- SOUTH ENGLISHMAN RIVER JUST U/S ENGLISHMAN RIVER
- ENGLISHMAN R. AT HIGHWAY 19A
- SHELLY CREEK AT HAMILTON RD
- SHELLY CREEK @ END OF BLOWER RD
- 2018 Samples
- Outlier 2011-2017

Centre & Shelly Ck sites 2011-2017 average: summer  $>200 \mu\text{S}/\text{cm}$ ; fall  $>150 \mu\text{S}/\text{cm}$   $\rightarrow$  values suggest groundwater influence

Upper Englishman generally  $<70 \mu\text{S}/\text{cm}$   $\rightarrow$  less groundwater influence

# Water Region 5-1 – Summer Specific Conductivity

Site

- DEPARTURE CREEK @ NEYLAND RD (STN1)

- NANAIMO CHASE RIVER AT ESTUARY PARK (RDN CWMN)
- MCGARRIGLE CK @ JINGLE POT RD
- CATSTREAM @ PARK ABOVE CONFLUENCE WITH CHASE RIVER
- MCCLURE CREEK AT MONTESSORI SCHOOL NANAIMO (RDN CWMN)
- 2018 Samples
- \* Outlier 2011-2017

Conductivity levels in  $>1000 \mu\text{S}/\text{cm}$  suggest saline influence (tidal)  
 Higher conductivity values in developed areas could also be associated to anthropogenic influences (road run-off)

# Water Region 6 – Summer Specific Conductivity

Lower Holden Ck conductivity averages 20,000  $\mu\text{S}/\text{cm}$  suggesting saline influence (tidal)  
Beck Ck 2011-2017 averages 500  $\mu\text{S}/\text{cm}$ , potentially from historic coal mining in the area

## Water Region 6 – Fall Specific Conductivity

Lower Holden Ck conductivity averages 20,000  $\mu\text{S}/\text{cm}$  suggesting saline influence (tidal)  
Beck Ck 2011-2017 averages 500  $\mu\text{S}/\text{cm}$ , potentially from historic coal mining in the area

## Water Region 7 – Summer Specific Conductivity

## Water Region 7 – Fall Specific Conductivity

Mallett Creek conductivity 2011-2017 averaged summer 142  $\mu\text{S}/\text{cm}$ ; fall 110  $\mu\text{S}/\text{cm}$ , suggesting groundwater influence

# Specific Conductivity

Possible groundwater influence:			
South Englishman	Annie Creek	Nanoose Creek	Walley Creek
French Creek	Cottle Creek	Mallet Creek	Shelley Creek
Swane Creek	Centre Creek	Craig Creek	Departure Creek

Possible human contaminant influence:			
Millstone River	McGarrigle Creek	Chase River	Beach Creek
Cat Stream	Beck Creek	Holden Creek	Grandon Creek

- Turbidity increases in the fall are often due to rain events, observations listed above are mostly attributed to summer season values
- Most east coast Vancouver Island streams have both groundwater and human influences

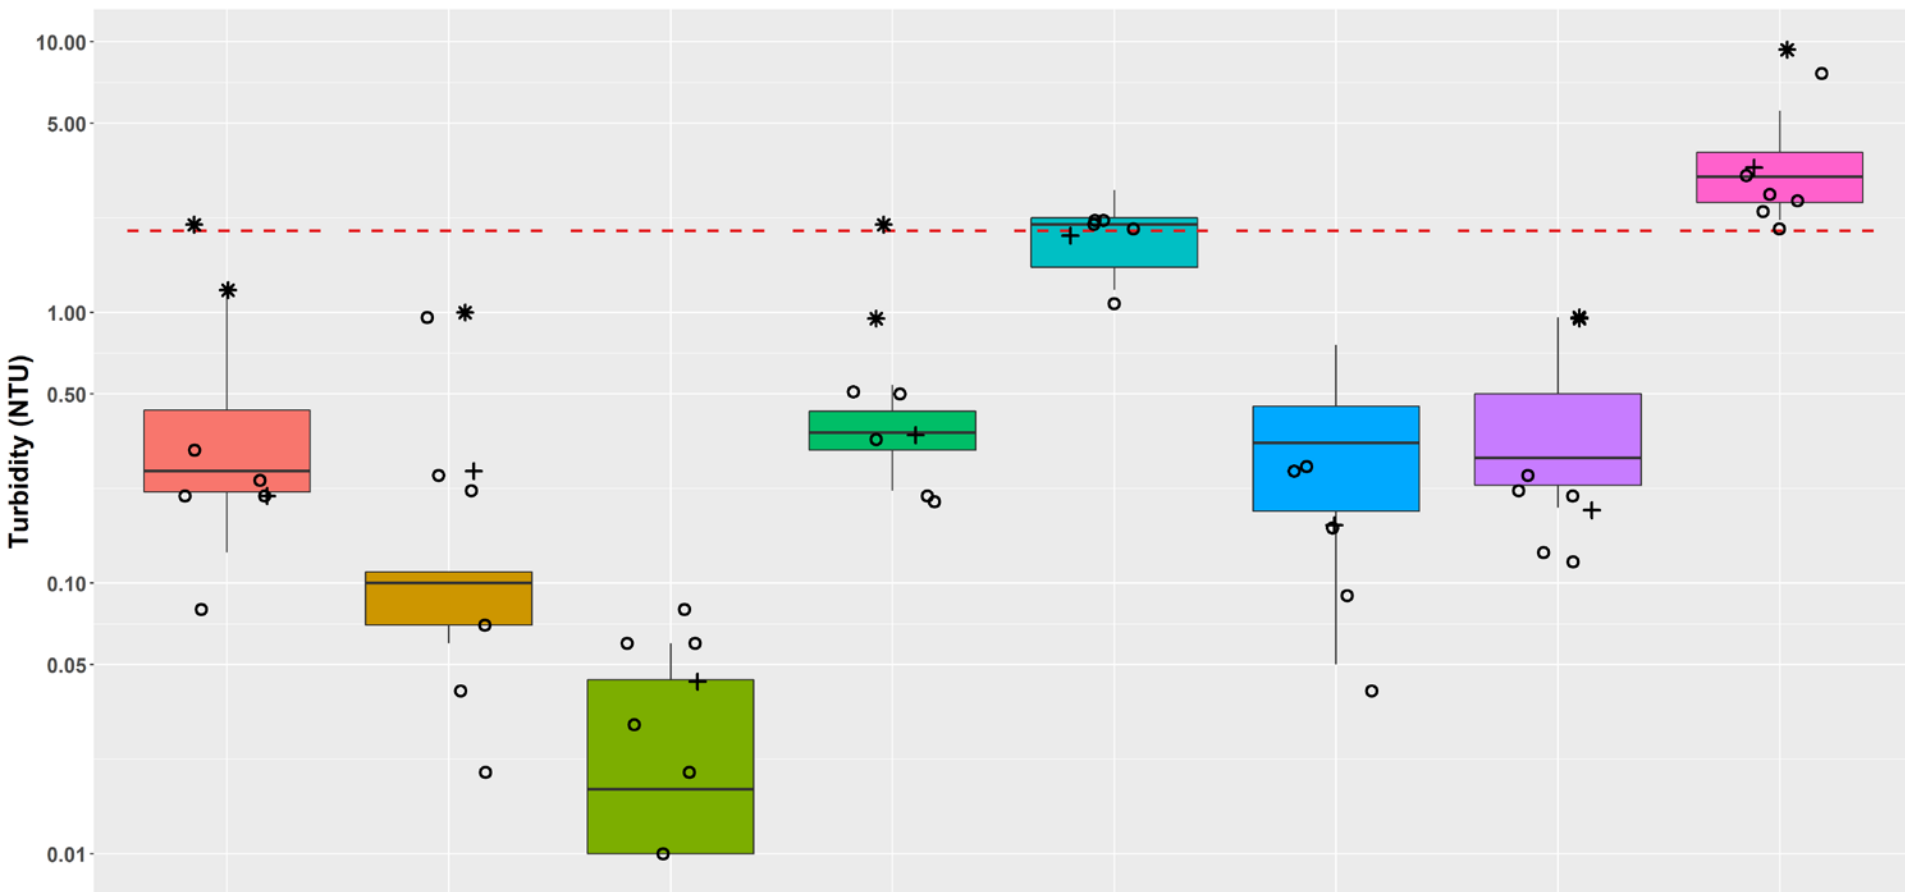

# Turbidity

- **January to September (summer period) maximum: 2 NTU**
- **October to December (winter period) maximum: 5 NTU**

- The amount of suspended solids in water
- ↑ turbidity can ↑ water temperature as suspended particles will absorb sun more efficiently than clear water
- Varies in pristine streams, generally <2 NTU

# Water Region 1 – Summer Turbidity

Lower Holden Creek turbidity exceedances most likely from tidal influence

### Water Region 7 – Summer Turbidity

### Water Region 7 – Fall Turbidity

Mallett Creek turbidity averaged summer 6.62 NTU; fall exceeded guideline Oct 9<sup>th</sup> & 30<sup>th</sup>, suggesting impaired watershed functions

# Summer Turbidity

# Exce.	Jan-Sept (summer) guideline 2 NTU exceeded at:			
6	Deep Bay Creek		Lower Holden Creek	
5	McClure Creek		Mallett Creek	
4	Beach (Memorial)	Annie Creek		Millstone (Jingle)
3	Grandon (Laburnum)	Swane Creek		Walley (Hammond)
2	Beach (Hemsworth)	Departure (Outlet)		Cottle (Nottingham)
	Millstone (Biggs)		Millstone (Barsby)	
1	McGarrigle (Jingle)	Cat Stream	Grandon (W Cres)	Millstone (E Well)
	Departure (Newton)		Cottle (Hammond)	

- Some high values are explained by field observations on a given day
- Urban streams much more difficult to interpret due to anthropogenic influences

# Fall Turbidity

# Exce.	Oct-Dec (fall) guideline 5 NTU exceeded at:		
6	Lower Holden Creek		
3	Annie Creek		
2	Shelly (Blower Rd)	Mallett Creek	
1	Knarston (Lantzville)	Walley (Morningside)	
	Shelly (Hamilton)	Walley (u/s beach)	Bloods (Dickinson)

- In 2017, 53 of the 63 fall exceedances were experienced after heavy rain events
- In 2018, there were only 18 fall turbidity exceedances → did not capture fall flush across all sites?

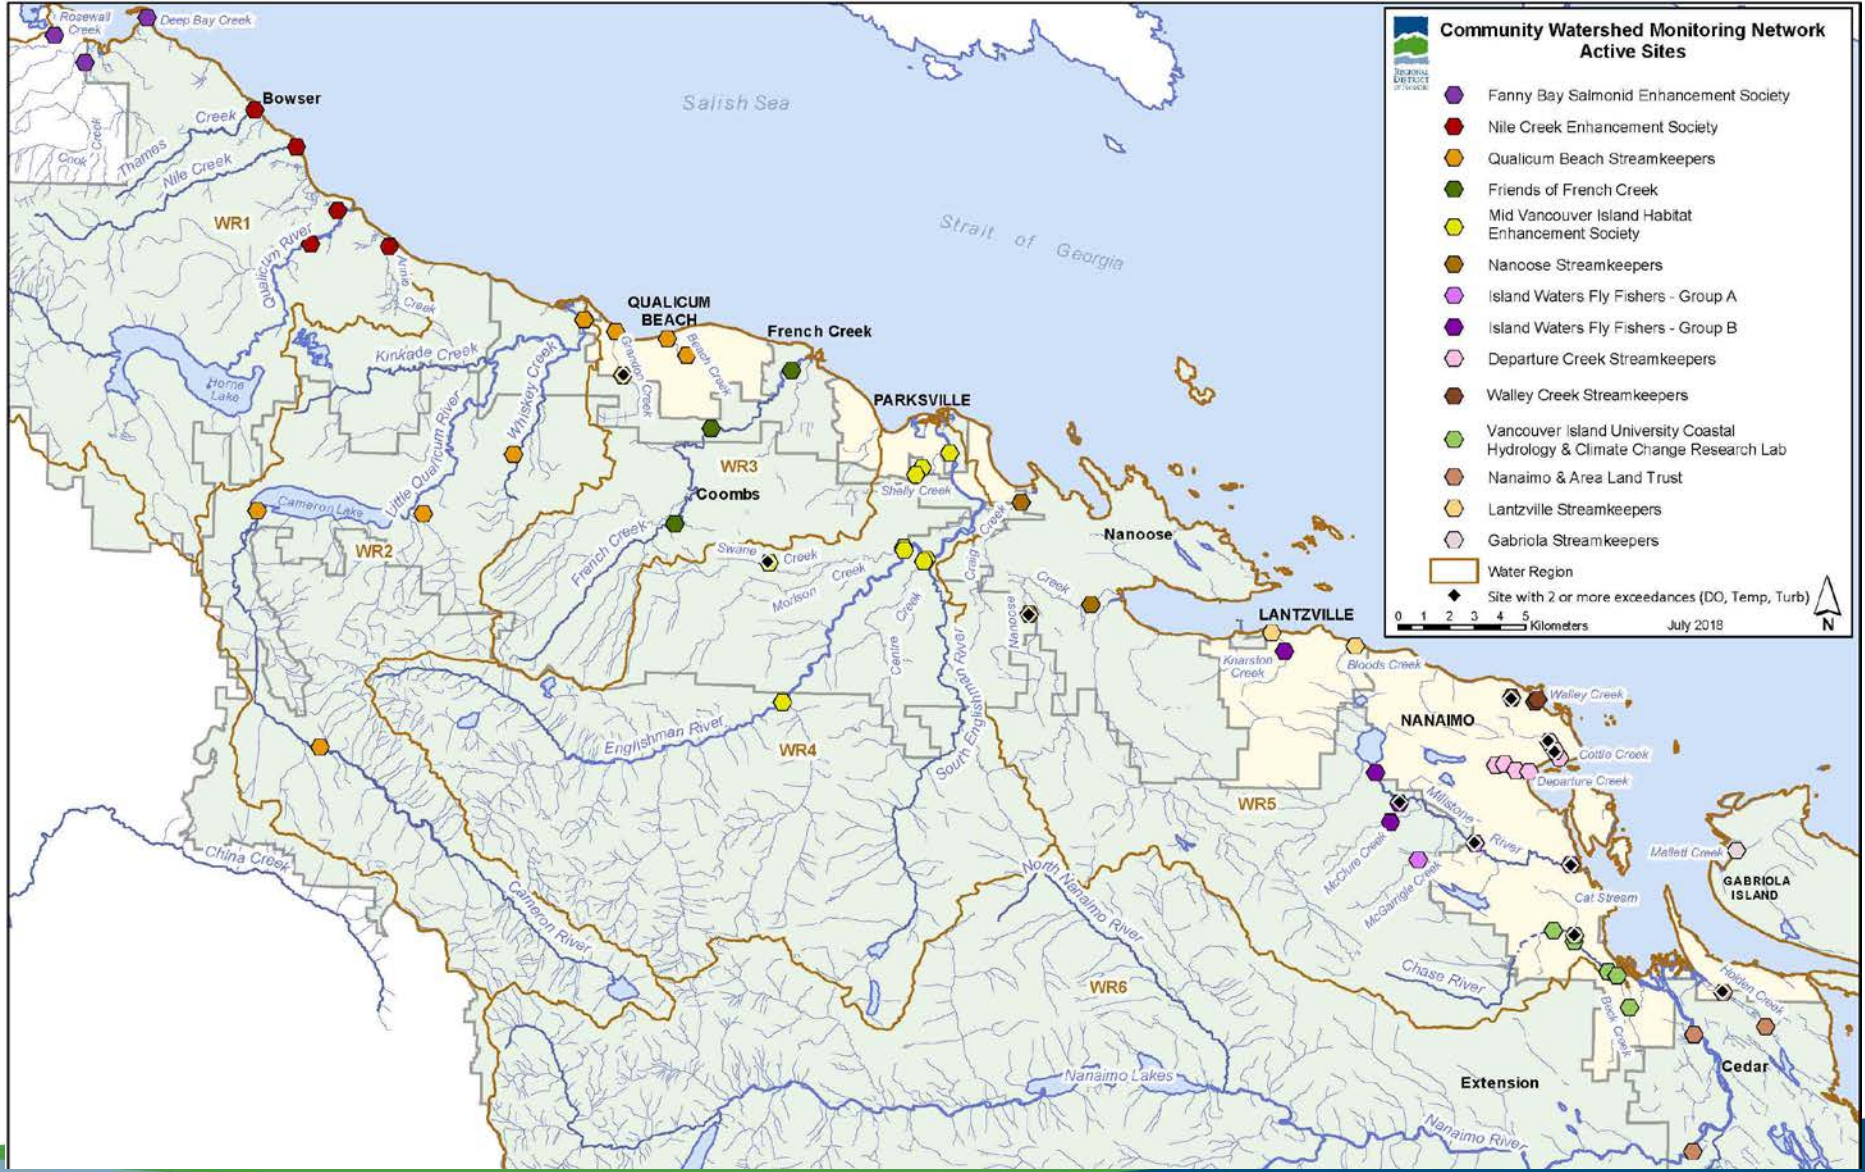

# 2018 Data Summary

Two or more exceedances at one site  
(based on: temperature, dissolved oxygen and turbidity)

Group	Watershed	Sample Location	EMS	Exceedences	Dates
VIU	Chase River	Cat Stream (Park Ave)	E290486	Temp & Turb	Aug 7, 28
DCS	Cottle Creek	Cottle Ck (Nottingham)	E290473	DO & Temp DO, Temp, Turb	Aug 7 Aug 14
DCS	Cottle Creek	Cottle Ck (Hammond)	E309186	Temp & Turb	Aug 7
QBS	Grandon Creek	Grandon (Laburnum)	E288091	DO & Turb	Aug 7, 21
IWFF	Millstone River	Millstone R (E Well)	E290480	DO, Temp, Turb	Aug 7
IWFF	Millstone River	Millstone R (Barsby)	E290481	Temp & Turb	Aug 7
IWFF	Millstone River	Millstone R (Jingle Pot)	E306294	Temp & Turb	Aug 7
NSS	Nanoose Creek	Nanoose (Matthew X)	E294020	DO & Temp	Aug 7
NALT	Holden Creek	Lower Holden Creek	E309281	DO, Temp, Turb Temp & Turb DO & Turb	Aug 7, 14 Aug 21, 28, Sept 4 Sept 11, Oct 16
MVIHES	Englishman R	Swane Ck (Errington)	E308186	DO & Turb	Aug 7, 14, 21
WCS	Walley Creek	Walley Ck (Hammond)	E306256	Temp & Turb	Aug 7

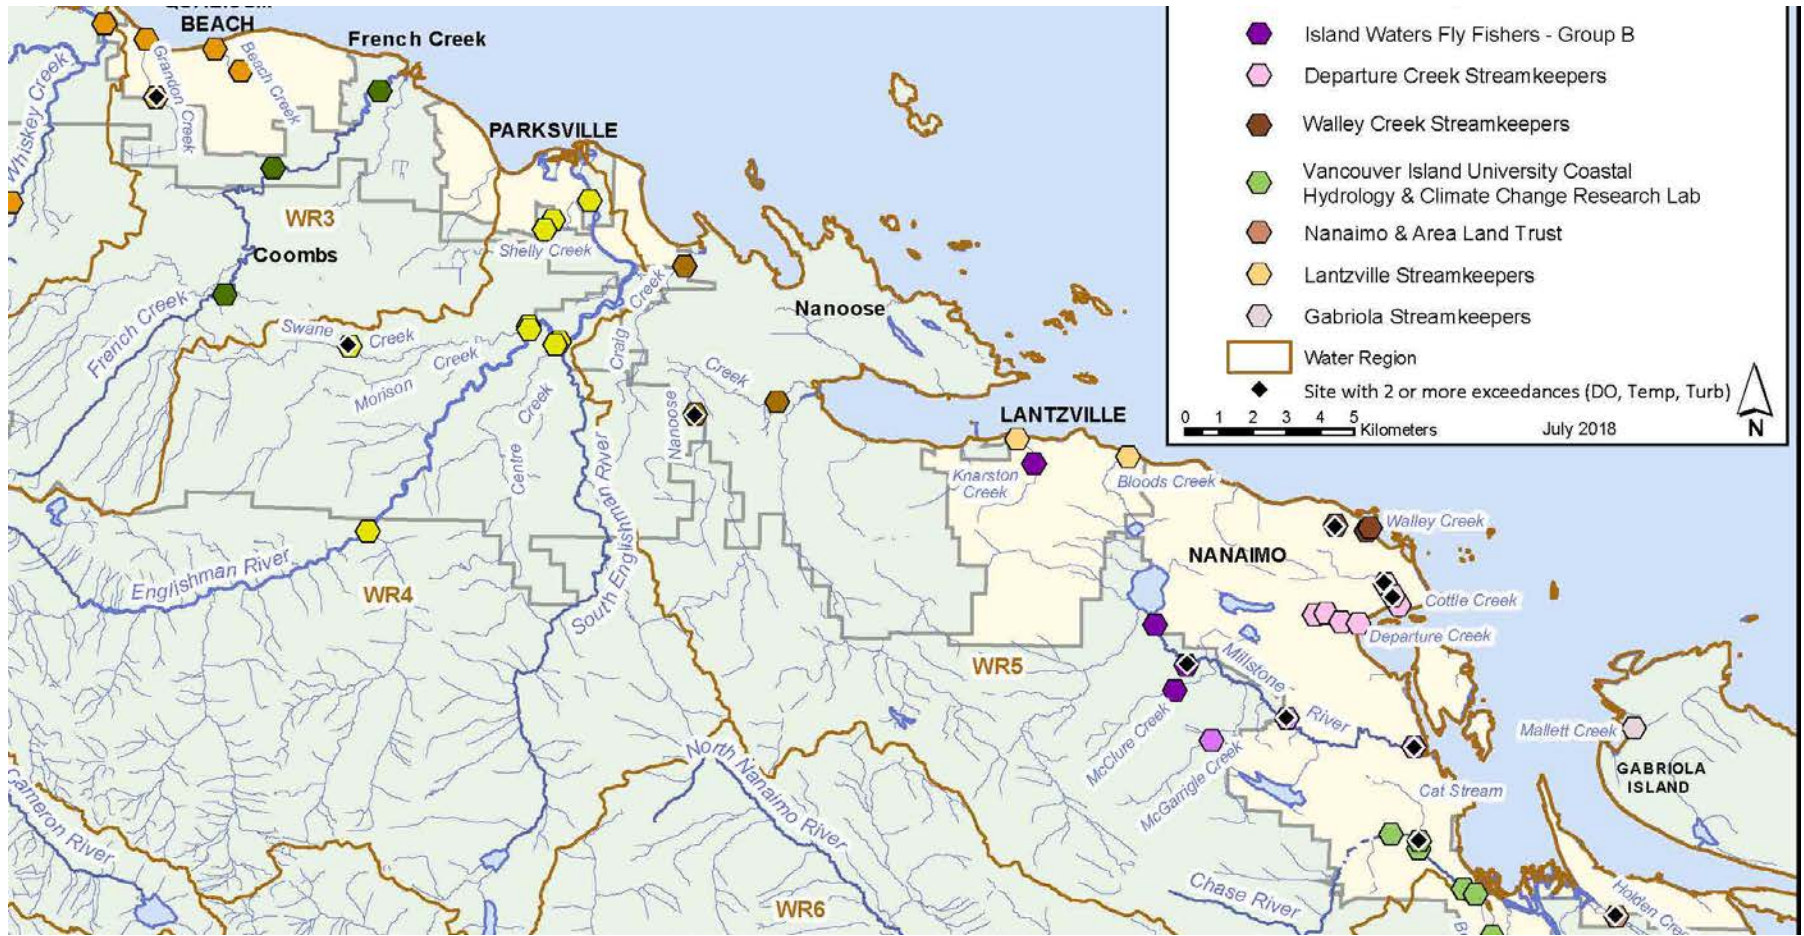

# 2018 Data Summary

Two or more exceedances at one site  
(based on: temperature, dissolved oxygen and turbidity)

# 2018 Data Summary

Two or more exceedances at one site  
(based on: temperature, dissolved oxygen and turbidity)

- 11 / 62 sites had exceedances at one or more parameter on a given sample date
- All these were in summer, except on Oct 16 at Lower Holden Creek (DO & Turb)

# In 2019...

- Currently, all sites maintained
- QA/QC lab analysis completed (10% of sites)
- Additional Lab Analysis:
  - Total Phosphorous (May – Sept)
  - Chloride (Summer Sample Period)
  - Biological Monitoring (Sept 15 – Oct 15)
- New and returning volunteers...

**2019 Sample Period (Tuesdays):**  
**Summer Low Flow** Aug 6 – Sept 3  
**Fall Flush** Oct 8 – Nov 5\*

*\*Tentative dates as fall sampling is weather dependent,  
may start 1 – 3 weeks before or after dates listed*

***See handout for important dates***

# 2019 Training Session

## Tuesday, July 23<sup>rd</sup>:

- **9:30am - 12:00pm at French Creek** (Hatchery/Community Park at 815 Miller Road)
- **1:30pm - 4:00pm at Millstone River** (Bowen Park at the lower picnic shelter off of Wall Street)

# One last thing...

## Action Plan Update

DRINKING WATER & WATERSHED PROTECTION PROGRAM

Are you interested in the future of Drinking Water and Watershed Protection in our region? Get Involved in the future of water sustainability!

Complete our survey and be entered to win a rain barrel!

Get Involved RDN!

[getinvolved.rdn.ca/dwwp-action-plan-update-2019](http://getinvolved.rdn.ca/dwwp-action-plan-update-2019)

*We will send this link to all the volunteers and hope you circulate it in your networks so we can get lots of response and input!*

# Thank you!!
