Appendix A - Map of French Creek Water Service Area

Appendix B - Water Quality Testing Results

Appendix C - Emergency Response Plan

1. Introduction

The following annual report describes the French Creek Water Service Area and summarizes the water quality and production data from 2009. This report also includes a summary of inquiries and complaints, completed and proposed maintenance activities, the Emergency Response Plan, and the Cross Connection Control Program.

This report is to be submitted to the Vancouver Island Health Authority by the Spring of 2010.

2. French Creek Water Service Area

The French Creek Water Service Area was established in 1980 and comprises an area west of Drew Road and south of the Island Highway between the City of Parksville and the Town of Qualicum Beach. The water source for the French Creek Water Service Area comes from a series of groundwater wells located within the Sandpiper subdivision. The water supply is chlorinated and stored in one reservoir. A map of the French Creek Water Service Area is provided in Appendix A for reference.

2.1 Groundwater Wells

Six groundwater production wells are present in the French Creek Water Service Area.

| Well / Name | Well Depth | In Use | Wellhead Protection In Place | Treated/Untreated with Chlorine |
|-------------|------------|--------|------------------------------|---------------------------------|
| #1 | 39.6 m | No | Yes | n/a |
| #2 | 40.5 m | Yes | Yes | Treated |
| #4 | 40.2 m | Yes | Yes | Treated |
| #5 | 50.3 m | No | Yes | n/a |
| #6 | 52.4 m | No | Yes | n/a |
| #7 | 39.6 m | Yes | Yes | Treated |

French Creek Well #1 has not been used for several years due to low production and high iron levels. Well #1 is expected to be converted to a monitoring well in 2010. Wells #5 and #6 are temporarily not in use due to elevated levels of iron and manganese.

2.2 Reservoirs

One service reservoir (steel construction) is present at 1225 Sunrise Drive, Parksville, B.C. and has a capacity of 364 m³ (80,000 imperial gallons).

2.3 Distribution System

The water distribution system in the French Creek Water Service Area is summarized in the table below. Fire hydrants (68) are located throughout the water service area.

| Watermain Material | Length of mains in NBP Water Service Area | Prevalence in Water Service Area |
|--|---|----------------------------------|
| <u>Asbestos-concrete:</u> 150mm or smaller 200mm or larger | 3.5 km 0.8 km | 52% 12% |
| <u>PVC:</u> 150mm or smaller 200mm or larger | 0.9 km 1.5 km | 14% 22% |

Note: 'PVC' is poly-vinylchloride (plastic)

3. **Water Sampling and Testing Program**

Water sampling and testing is carried out weekly in the distribution system. The following table includes a summary of all testing.

| Timing | Location | Tests |
|--------------------------------------|-------------------------------|---|
| Weekly | RDN (in-house) Laboratory | Total coliforms, E.Coli Temperature, pH, Conductivity Chlorine residual, Salinity Total Dissolved Solids |
| Weekly (Health Dept. Requirement) | BC Centre for Disease Control | Total, Fecal coliforms, |
| Monthly | RDN (in-house) Laboratory | Iron, Manganese |
| Annual Source Water Testing | North Island Labs | Complete potability testing of each well |
| Annual System Water Testing | North Island Labs | Complete potability testing of distribution system |

4. **Water Quality - Source Water and Distribution System**

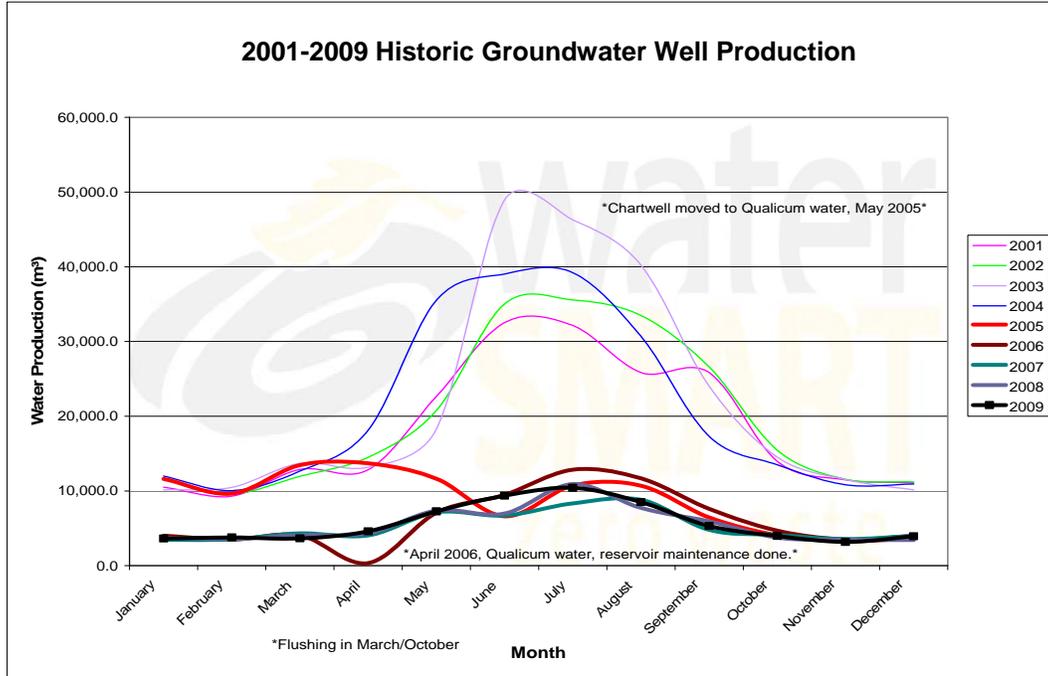

Up-to-date water quality reports and lab data are posted monthly on the RDN website at www.rdn.bc.ca in the WaterSmart section, under “Communities”. Tables of water quality testing results for both the source water and distribution system are provided at the end of this report under Appendix B.

5. **Water Quality Inquiries and Complaints**

A few complaints and inquiries were received from the French Creek water service area in 2009, and were typically related to isolated incidents of iron discoloration in the water.

6. Groundwater Production and Consumption

The monthly groundwater production in the French Creek Water Service Area for the past 9 years is shown in the chart below. There are 234 water service connections in French Creek. Groundwater production in 2009 was average in comparison to previous years.

Consumption

In the Fall/Winter of 2009, the average usage per home in French Creek was 0.55 cubic metres per day (121 imperial gallons). In the summer, the average water usage was 1.21 cubic metres per day (266 imperial gallons). Based on these figures, the annual consumption per capita is estimated to be 321 L/day (based on 2.4 people per household). This consumption is 7% less than the RDN system average of 345 L/day/capita for 2009.

7. Maintenance Program

Weekly pump station inspections are carried out to reduce or eliminate the risk of contamination and system failure, and to ensure the consistent application of chlorine for treatment purposes. Watermains are flushed once annually in the Spring. Fire hydrants are serviced once per year (either 'A-level' or 'B-level' maintenance). The water storage reservoir is drained and cleaned once every two years.

Twenty-four hour on-call coverage is in place to respond to water system emergencies and alarms.

8. Water Service Area Projects

8.1 2009 Completed Studies & Projects

- Completed keyless door entry installations at the Field Office and pumphouses;
- Completed annual B-service fire hydrant maintenance;

- Completed the design of a new chlorine room at the French Creek Main pumphouse;
- Carried out a comprehensive water conservation campaign (Team WaterSmart);
- Updated and improved the RDN website at www.rdn.bc.ca;
- Updated the Emergency Response Plan;
- Considered Scada options for implementation;
- Utilized the Auto E-message service to notify member residents of water service disruptions and upcoming maintenance activities;
- Developed a low-flush toilet incentive;
- Maintained a high level of water quality;
- Maintained excellent customer complaint and service request response times;
- Continued quality control through regular testing and monitoring of our Water Service Areas; and,
- Completed additional educational programs.

8.2 2010 Proposed Projects & Upgrades

- Convert one unused production well to a monitoring well;
- Review water treatment costs for the French Creek Water Service Area using the Nanoose Bay estimates;
- Complete the Cross-Connection Control bylaws, and establish a procedure for reviewing commercial and industrial properties for Water Service Area risks;
- Install chlorine analyzers in French Creek; and,
- Clean the service reservoir in French Creek.

9. **Emergency Response Plan**

The Emergency Response Plan (ERP) was reviewed and updated in 2009. A copy of the ERP is attached in Appendix C.

10. **Cross Connection Control**

A formalized Cross Connection Control Program was initiated in 2007. Cross connection controls in-place include dual check valves at each service connection, fire hydrant use permits, and water supply bylaws noting discontinued service if a threat to the water supply is perceived by staff.

In 2008, a review and comparison of successful cross-connection control programs in other small Water Service Areas nearby was undertaken. A database of commercial customers was set-up in order to keep track of the maintenance history of testable backflow prevention assemblies at each site. Three RDN Operations staff achieved Backflow Prevention Tester's certification.

The program in 2010 will include:

- A survey of existing and potential cross-connections,
- An audit of RDN-owned facilities in each water service area,
- The preparation of a draft bylaw to allow enforcement of the Cross Connection Control Program.

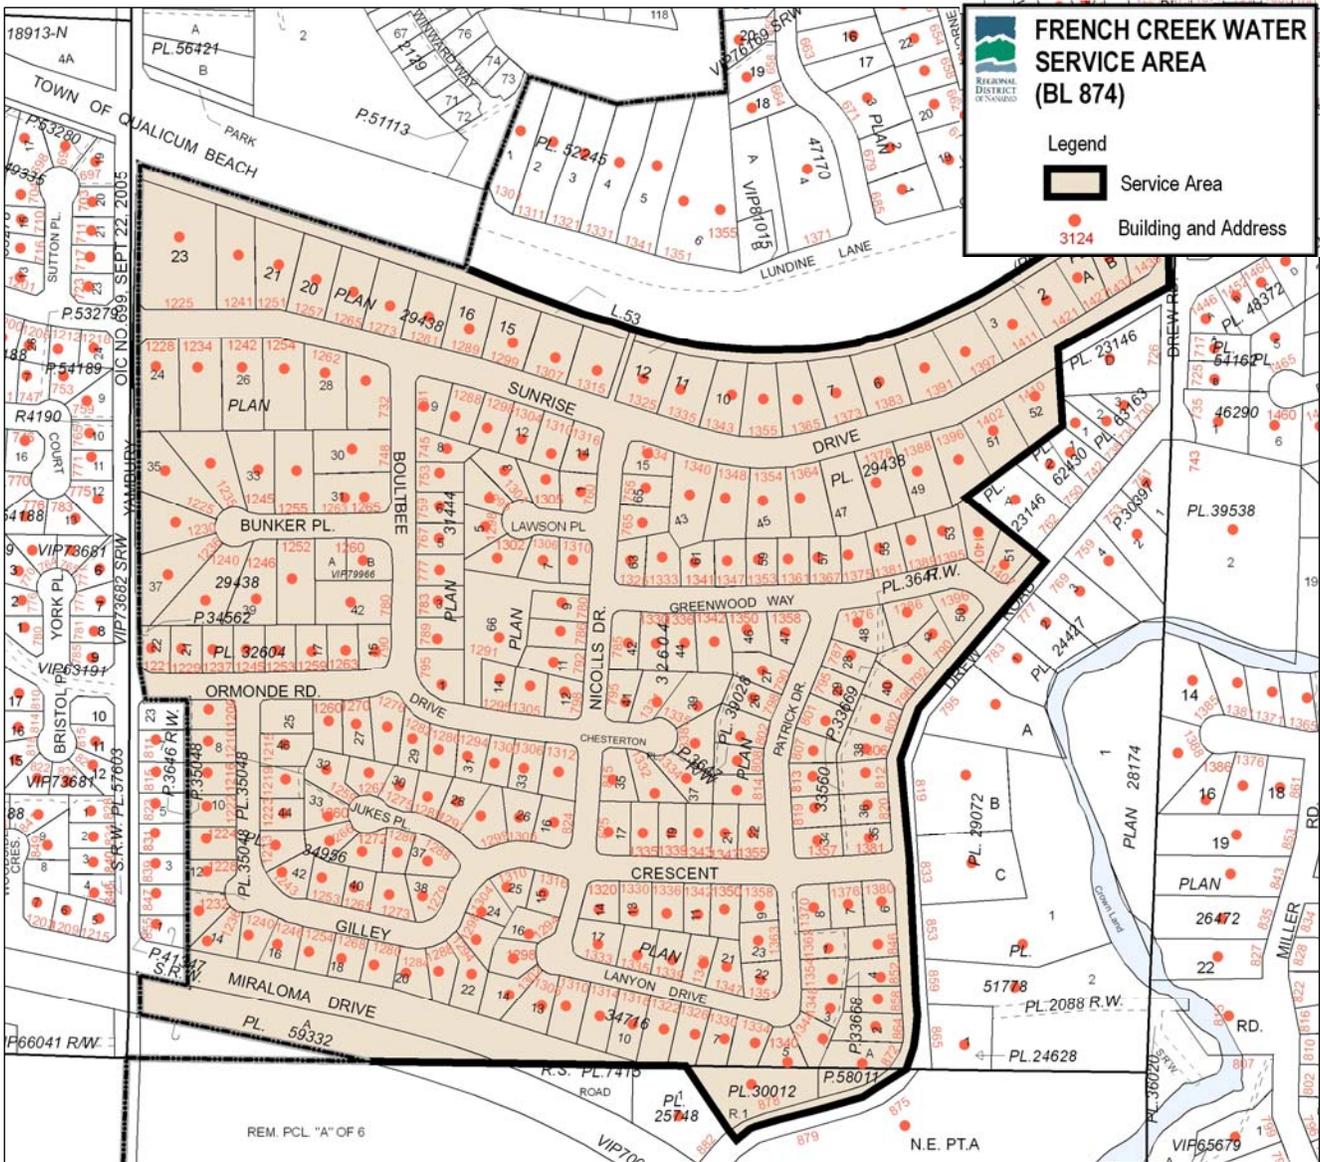

11. Closing

An annual report for the year 2010 will be prepared and submitted to the Vancouver Island Health Authority in the Spring of 2011. Annual reports are also available on our website at www.rdn.bc.ca in the WaterSmart section, under “Communities”.

Red font indicates non-compliance with Canadian Drinking Water Guidelines / BC Approved Water Quality Guidelines

Coliforms are measured in colony forming units (CFU) per 100 millilitres of water

* Yellow Column Coliform tests are done by Health Department

Green tests are completed by RDN

Comments:

Iron and manganese are found naturally in drinking water. Levels found in these samples are not a health concern.

Note: Total coliforms can be an indicator of adverse water quality if the result in the re-sample is confirmed positive. (United States Environmental Protection Agency (EPA), 2008) RDN Water samples are always tested for Fecal coliform bacteria at the same time as Total coliforms to rule out the presence of harmful pathogens.

*Resampled and had <1 for all Coliforms

French Creek Distribution Water Analysis Results
