**QUESTIONS & ANSWERS**

Question 1) Will the successful proponent be expected to carry out GHG forecast modeling to at least 2032 for the RDN's Corporate operations as part of this project?

Answer 1) Yes, the successful proponent will be expected to prepare a GHG forecast to at least 2032 for the RDN's corporate operations as part of the project. Modelling, however, is not to be the focus of the project, so formal modelling may not be required. The focus is to be on preparing recommended options on how best to reduce GHG emissions. This is stated on page 3 of the RFP, as follows, "The main purpose of this review and new plan is to provide recommendations and options to achieve carbon neutral operations by 2032."
